

Yehi sab stories pr linkedin pr post karne se followers badenge..

Sab mast ek khatrnaak story banake aao aur saath smjhnane ki practice karke aao... tb maja aaega..

ICU Life-Support Monitoring System

I am working on a very interesting use case where I am wokring on an application which helps doctors and ICU staff to monitor Life supporting equipements in the ICU.

This application works using an IOT device that is connected to Life support system that consists of Oxygen, Heart Lung Machine, ECG, BP, Ventilator, that IOT device sends sensor data to azure cloud on an event hub.

From here our application comes into picture, Our application is a three tier application where we have frontend, backend and database.

We also have a mobile application.

For this application, we had 4 frontend, 3 backend developer and 2 app developer,

My role in this project is to design the deployment architectre and CICD pipelines as per devsecops guidelines
