

1. Infra Set kar denge dono environment ka...
2. Multi Environment Application Deployment
- 2.1 Pehle hum normal YAML based deployment likhenge alg stage bana ke.. Dev me automatic deployment, production me approval gate ho jaega...
- 2.2 Fir iske baad hum niharenge code ko ki kya dard hai kya repeat ho raha hai... iske baad apn us code ka optimization ke lie helm laenge fir pura deployment multi environment helm ke through karenge
- 2.3 Fir se code niharenge aur firse aur problem dhondhenge, aur fir laenge ArgoCD
- 2.4 Dev ke lie apna ArgoCd ka instance, prod ke lie apna argocd ka instance prod kubernetes pr chlega..
- 2.5 GitHub ko argocd se connect krke application bana ke sync kr denge..
3. ye feel karke heal ho jane ke baad hum log manifest aur deployment, secrets, config map, pv, pvc, ye sb optimize karenge..
4. Prometheus Grafana Helm chart se chla denge mast...

Dev Frontend: Iske andar developer apni microservice ke changes ko dalke pure system me check krta hai ki koi dikkat to nahi hai..
